#### Project 271 (cont.)

透過玻璃和金屬構成的外牆，將有的舊有的生活空間重新擴展，創造出屋內的垂直空間。這座新的建築體也重新定義了環境，並有它自己的高度。屋子的前庭的鋪設外牆就像一道影響街道的圍欄，為這一棟新創的樓房上去增添厚度的感。

新創出上的開放式樓梯為屋中的樓梯而設置更多垂直空間。樓梯房子可以解決其連續的室內空間，以適應內上的制約樓梯通過樓梯。理念與生活取得和諧自然，也解決了老屋與新建築設計之間高度的不協調問題。

房子外牆空間由玻璃組成，因此設計使光線能穿入到原來建築的樓梯和客廳區域，為室內增添一份。

The existing living rooms aren't expanded by the front side as well as on the back side within the street environment. By adding the walls of glass facades and metal frames, the facade becomes insistent and visible and suitable at the front facade. The glass facade acts as a screen to the street and setting an enclosed nature connected to the surrounding nature.

Through the introduction of a new concrete and steel stair, some vertical spaces get located within the old structure. The existing space is a small family member and exists. The height differences between the old and the new building are solved naturally.

By using glass facades, the light can penetrate deep into the structure, which brings into the light into the living and the dining room. It was about the living room throughout the stair and the light into the living room.
